## COVER STORY

## Salisbury Fire Department Receives AHA Award for Cardiac and Stroke Care

**THE SALISBURY FIRE DEPARTMENT** has been honored with the American Heart Association’s Mission: Lifeline® EMS Silver Achievement Award, recognizing its commitment to providing high-quality, evidence-based care to individuals experiencing the most severe forms of heart attacks and strokes. This national award highlights the department’s dedication to improving outcomes for patients with life-threatening cardiovascular conditions by delivering timely, research-based care beginning in the prehospital setting.

Mission: Lifeline® EMS is a national initiative of the American Heart Association (AHA) aimed at enhancing systems of care for patients with high-risk, time-sensitive emergencies. The program supports collaboration across EMS agencies, emergency communications centers, and hospitals to eliminate barriers to prompt treatment from the initial 9-1-1 call through hospitalization and discharge. The Mission: Lifeline® EMS Silver Achievement Award recognizes agencies for their efforts to improve system-wide care and outcomes. By meeting specific program measures, the Salisbury Fire Department has demonstrated its dedication to delivering excellence at every step of the patient journey.

“Arguably the most important link in the chain of survival for acute stroke and cardiovascular emergencies is emergency medical services and prehospital professionals,” said Kacey Kronenfeld, MD, FAEMS, Chair of the AHA Mission: Lifeline® EMS Taskforce. “Early identification, stabilization, and coordination within regional systems of care give patients the best chance for rapid, definitive therapies and positive outcomes.”

“This recognition reflects the dedication and excellence of the Salisbury Fire Department,” said Mayor Randy Taylor. “We are proud of our firefighters and EMS personnel for the lifesaving care they provide to our community every day.” \*

# The Science of Vehicle Crashes for First Responders

*A free 3-hour workshop led by Janet Bahouth, D.Sc.,  
Director of the Crash Center for Research and  
Education.*

### Attendees will learn:

- Crash and energy phases on a human body
- Effects of crash forces on occupants
- Occupant seat belt use and air bag interaction
- Identification of crash cues that indicate potential injury
- Accurate completion of eMEDS for MVCs
- Crash Scene Checklist and Hot Wash template use

### MIEMSS has approved this course for EMS Credit Hours:

- Trauma & Burns 1.00 Hour
- Elective 2.00 Hours

This course will be held three times; each session is from 1800 -2100 at the Robey Public Safety Training Center, 2200 Scott Wheeler Drive, Marriottsville, MD, 21104. Registration is open until 3 days prior to the course's start.

- **Tuesday June 16**
- **Tuesday July 7**
- **Monday August 3**

**Use the QR code to register for a session or go to:**

<https://app.smartsheet.com/b/form/019e40e3097a7e2a8c2eb13a7dffe75e>

*This activity is funded through grants from the Maryland Highway Safety Office  
to Crash Core and MIEMSS .*

# Allegany County Honors Young Hero Who Saved Mother's Life

ON JUNE 1, 2026, the Allegany County 9-1-1 Joint Communications Center, in conjunction with UPMC Western Maryland and Cresaptown Elementary School, recognized 10-year-old Anny Platt with the agency's inaugural 9-1-1 Courage Award for her extraordinary bravery and lifesaving actions during a medical emergency involving her mother on April 4, 2026.

On that day, Anny's mother suffered a severe medical emergency that ultimately led to cardiac arrest. Faced with an incredibly traumatic situation, young Anny remained calm, called 9-1-1, and followed emergency instructions provided by 9-1-1 personnel. Most remarkably, she immediately began CPR on her mother until emergency responders arrived. Anny's quick thinking, courage, and determination all played a critical role in saving her mother's life.

***“Anny showed incredible strength and bravery during one of the most frightening moments imaginable...”***

9-1-1 Specialist Shaunna Simmons handled the 9-1-1 call, providing CPR prearrival instructions and guiding Anny through the emergency. 9-1-1 Specialist Amber Thomas and Shift Supervisor Jeremy Jack assisted Shaunna. Working together, their teamwork and professionalism supported the successful outcome.

Established in 2023, the 9-1-1 Courage Award recognizes children who demonstrate exceptional bravery and use 9-1-1 to help save others' lives during emergencies. 9-1-1

Photo: Allegany County DES

Specialist Jordan Ross developed the concept, recognizing the importance of honoring children who perform courageously in the face of adversity.

“Anny showed incredible strength and bravery during one of the most frightening moments imaginable,” said Communications Chief Steve Shipley. “Her actions are a reminder that even at a young age, people can make a tremendous difference. We are proud to recognize Anny as the first recipient of the 9-1-1 Courage Award.” \*

# Point/Counterpoint Conference XLIII

May 7–8, 2026 (Baltimore, MD)

**EVERY SPRING**, the Point/Counterpoint Conference draws trauma care professionals from across the region and around the country to Baltimore for two days of high-quality education and interactive discussion centered on trauma patient care. Presented by the American College of Surgeons and the Maryland Committee on Trauma, this year’s conference – held May 7-8, 2026, at the Renaissance Baltimore Harborplace Hotel – featured plenary sessions, breakout tracks, special guest lectures, and a vendor hall tailored to physicians, nurses, prehospital clinicians, and other trauma care professionals.

Point/Counterpoint focuses on state-of-art management strategies for common clinical issues, as well as challenging and controversial topics. Breakout sessions tailored to a wide range of relevant topics and “hot button” trends encourage audience participation. This year’s program included a “debate” over national triage guidelines between MIEMSS Executive Director Dr. Ted Delbridge (pictured above) and Dr. Sharon M. Henry of the R Adams Cowley Shock Trauma Center.

State EMS Medical Director Dr. Tim Chizmar (above, at left) and Dr. Michael G. Millin discussed the use of backboards and cervical collars during prehospital transport. Other highlights included injury prevention and trauma systems expert Dr. Ellen MacKenzie, whose 2026 Charles C. Wolferth, Jr., MD Memorial Lecture focused on ensuring quality recovery post-trauma, and Dr. Adil Haider, who addressed the role of acute care surgeons in the evolving AI landscape during this year’s Sharon M. Henry, MD / MDCOT State-of-the-Art Lecture. Learn more about Point/Counterpoint at <https://mdcot.com/pcp-2026/>. \*

HEALTH PROFESSIONALS

## Patient Perspective

During recent community blood pressure screenings conducted, an MD MIH team encountered an elderly female with a critically elevated blood pressure reading of 180/110. Further assessment revealed that she had recently relocated and was without transportation following a motor vehicle accident. The patient expressed uncertainty regarding access to transportation services or locating local primary care offices. Of particular concern was her medical history, which included two prior strokes.

The MIH team provided comprehensive support, assisting her in establishing care with a primary care physician, reconnecting with necessary medications, coordinating transportation resources, and completing electronic documentation required by the MVA to register a newly purchased vehicle. The team followed the patient for eight weeks, during which her blood pressure returned to normal, and she remains compliant with her medication regimen. Although the patient had not yet utilized emergency services, early intervention by the MIH team likely prevented a potentially catastrophic health outcome.

"If it had not been for the MIH team, I would not have been able to get into a new primary care office so easily. Without my car, I was moving to an area where I did not know about transportation options. I was at a loss about where to start, and the girls were so helpful and really cared about me."

## DEAR READER

# MD MIH Pre-Conference

January 30, 2026

This year, at the Winterfest EMS Conference, the first MIH pre-conference took place with unexpected massive success. During planning, Subcommittee Chair and Paramedic Matt Burgan stated that the bar would be low, only hoping for a mere six registrants. We had close to 40 registrants, with another handful of participants switching their selection for the pre-conference that morning! Clinicians from all over the state attended, travelling west from Salisbury, east from Frederick County, north from Charles County, and south from Cecil County. Chesapeake College graciously lent one of its lecture halls to accommodate such a crowd.

Getting us warmed up with an inspiring and forecasting speech was none other than Dr. Joseph Ciotola, QACDES Medical Director, and recently retired MD Region IV Medical Director. He offered a wealth of knowledge depicting the past, present, and future of MIH, touching on all aspects of what we do: patient care and safety, advocacy and navigating the healthcare system, and reducing financial burdens on patients and hospital systems.

## SPEAKER LIST

### Frederick County Fire Department

- Matt Burgan

### Talbot County Department of Emergency Services

- Rachael Cox and Gillian Kinnamon

### Salisbury Fire Department

- Aaron Sebach, Jessica Stoner, and Amanda Adkins

### Queen Anne's County Department of Emergency Services

- Joseph Ciotola, M.D.

### MIEMSS

- Timothy Chizmar, M.D.

### For All Seasons

- Lesa Mulcahy

### UMMS Shore Regional Health

- Melanie Chapple, PharmD
- Aaron "Zack" Royston, V.P. of Rural Healthcare Transformation

### Tidal Health Peninsula Regional Medical Center

- Kat Rodgers, Director of Community Health Initiatives

## DEAR READER CONTINUED

The circular nature of healthcare has proven again that health starts and ends in the home. Doctors might not be making many house calls anymore. We do.

Throughout the day, many speakers touched on several different aspects of MIH topics. The Salisbury SWIFT Team and a partnering physical therapist reiterated the dangers of falls and provided comprehensive strategies for mitigation. The STEADI model, available to the public through a quick online search, offers several tests to determine the severity of fall risk. Armed with these tools, MIH clinicians can better offer real-life techniques and advice to patients, families, and caregivers to keep their loved ones safe.

Paramedic Rachael Cox partnered with For All Seasons to demonstrate motivational interviewing (MI) through an interactive, role-playing exercise using real-world case studies. MI offers a different approach to conversing with our patients, focusing on self-realization and autonomy. Utilizing this approach can assist in breaking down social barriers, allowing patients to identify their core problem areas and to create manageable goals to reduce them. As it turns out, we're not the only ones who don't enjoy being told what to do.

UMMS Shore Regional Health's own Melanie Chapple, PharmD, spoke at length about the importance of medication reconciliation and education in MIH. Pharmacist-led medication education through telehealth has a proven track record of reducing hospital admissions by reducing medication errors, affordability barriers, cross-medication adverse reactions, and poor adherence. 911 Paramedics traditionally don't always gather an extensive medication history or know all of the conditions they treat. Partnering with a pharmacist deepens the knowledge of MIH clinicians, who then pass that education along to 911 clinicians. The more we know, the better our patients' outcomes will be.

Rare diseases are, well, rare, but both 911 and MIH clinicians do encounter them. Paramedic Gillian Kinnamon dove into the research to provide insight into non-traditional healthcare routes for patients with chronic and complex diseases. Throughout Maryland, there are multiple niche pharmacies and advocacy networks. Jurisdictional MIH programs can partner with these agencies to provide a roadmap for our special population patients and to expand their MIH client base.

Paramedic Matt Burgan facilitated a panel discussion between Dr. Tim Chizmar, Dr. Joseph Ciotola, Zack Royston, and Kat Rodgers. Having two hospital system administrators and two physicians with EMS, hospital, health department, and administration experience offered various perspectives regarding the benefits, barriers, and pitfalls of MIH. The conversation was riveting. The panelists were cordial, but at times the conversation was turned into a debate. You could have heard the sound of a pin drop in the room. The future of MIH is bright, but it is not without its challenges.

The Winterfest EMS Conference is the only EMS continuing education conference available on the Eastern Shore. While other regions of the state are rural, the eastern shore is especially underserved, being cut off from the major healthcare centers by the Bay Bridge. Clinicians and leadership serving this area offer creative solutions to complex problems. We are optimistic about turning this one-off into an annual continuing education opportunity.

The event went off without a hitch, thanks to Paramedic Rachael Cox meticulously planning the agenda and the logistics, with input from Paramedics Bradley Killian and Matt Burgan, and with a Talbot County colleague, Paramedic Gillian Kinnamon. The MD State SEMSAC MIH subcommittee would like to extend a heartfelt thank you to the Winterfest EMS Conference Committee Chairperson, Talbot County Paramedic Katelyn Killian, for recognizing the value in the continuing education of MIH and to the Talbot Paramedic Foundation for sponsoring the event. We can't wait to see everyone next year!

Sincerely,  
**Bradley Killian, NRP**

## PROGRAM SPOTLIGHT

# SWIFT-Salisbury Wicomico Integrated Firstcare Team

## How It Started

The Salisbury Fire Department SWIFT Program (Salisbury Wicomico Integrated Firstcare Team) began in 2017 as a collaborative pilot initiative between the Salisbury Fire Department, the Wicomico County Health Department, and what is now TidalHealth. The program was created in response to increasing non-emergency 911 utilization and preventable Emergency Department visits throughout the community. Rather than focusing solely on emergency response, SWIFT was designed to identify vulnerable residents with repeated EMS interactions and connect them with long-term healthcare, behavioral health, and social service resources. The program emphasized prevention, patient advocacy, and addressing the root causes of repeated EMS use.

## MAKING AN IMPACT

SWIFT continues to make a meaningful impact throughout Salisbury and Wicomico County by improving access to care and helping residents navigate complex healthcare and social systems. The program has helped reduce unnecessary EMS transports and Emergency Department visits, preserving emergency resources for higher-acuity incidents while improving quality of life for patients who often feel underserved or disconnected from care.

## MAKING AN IMPACT

Programs such as Minor Definitive Care Now (MDCN), Buprenorphine outreach, SAFE Fall assessments, EMS refusal follow-up, and opioid awareness education allow the SWIFT team to proactively identify risks and intervene earlier, often preventing larger medical crises from occurring. The expansion of opioid education into local schools has further strengthened community prevention efforts by equipping students with practical knowledge and overdose response skills that may ultimately save lives. Beyond measurable outcomes, SWIFT's greatest impact has been the trust it builds within the community through consistent support, advocacy, education, and patient-centered care. The program has become a model for how fire departments and healthcare systems can work together to improve both community health and emergency response efficiency.

## GROWTH & EXPANSION

Since its launch, SWIFT has grown from a small pilot program into a nationally recognized Mobile Integrated Healthcare initiative serving residents across the City of Salisbury and Wicomico County. What initially focused on frequent EMS utilizers has expanded into multiple innovative community health programs designed to address gaps in care before they become emergencies.

Expanded services now include the Minor Definitive Care Now (MDCN) program, a Community Paramedic and Nurse Practitioner team responding for low-acuity 911 calls to provide treatment on scene and reduce EMS usage as well as ED overcrowding; Buprenorphine initiatives aimed at improving access to treatment and recovery support for individuals experiencing opioid use disorder; the SAFE Fall Program (SWIFT Assessment of Falls in the Elderly), focused on identifying and reducing fall risks among older adults; and EMS refusal follow-up outreach, where SWIFT team members contact patients who declined EMS transport or treatment to better understand their needs, address barriers to care, and help prevent future emergencies.

## LESSONS LEARNED

One of the most important lessons learned through SWIFT is that many repeated 911 calls stem from unmet social and healthcare needs rather than true emergencies alone. Patients often face barriers such as transportation issues, difficulty accessing primary care, mental health concerns, substance use disorders, housing instability, or challenges navigating the healthcare system. SWIFT demonstrated that building relationships, maintaining regular follow-up, and providing individualized support can significantly improve patient outcomes while reducing unnecessary EMS and Emergency Department utilization.

## GROWTH & EXPANSION

SWIFT has also expanded its Opioid Awareness campaign into the Wicomico County School System, providing education to students on the dangers of illicit drug and opioid use. These presentations include hands-on instruction focused on recognizing the signs of an overdose, properly calling 911, and administering Narcan, empowering students with potentially life-saving knowledge and skills. Through continued partnerships, grant funding, and collaboration with healthcare and community organizations, SWIFT has expanded both its reach and its impact while continuing to adapt to the evolving needs of the community.

## BUILDING THE TEAM

Building the SWIFT team required a multidisciplinary and highly collaborative approach. The program combines the operational experience of Salisbury Fire Department paramedics with the clinical expertise of Nurse Practitioners, nurses, social workers, and other healthcare professionals from TidalHealth's Community Wellness division.

As the program expanded, so did the need for specialized knowledge in areas such as chronic disease management, substance use disorder treatment, geriatric fall prevention, care coordination, preventative health outreach, and public education. SWIFT's success continues to depend heavily on strong collaboration with behavioral health providers, social services, primary care offices, recovery programs, schools, and other community organizations that help address the broad range of patient needs.

## WHAT ADVICE WOULD YOU GIVE SOMEONE JOINING MIH TODAY?

“Don't be afraid to follow your passions, if you see a gap in care that you know needs fixing—take it and run with it. MIH is the Wild West of EMS and those passions will guide you.”

Miranda Webster B.S., NRP, CP-C  
MIH Coordinator, SWIFT

## DID YOU KNOW?

Based on preliminary data fatal overdoses in Maryland have been on the decline in recent years.

- o In 2025, there were 1,405 fatal overdoses in the state, the lowest level seen in the last 10 years.
- o This is a 53 percent decrease from the state's historic high of 2,800 in 2021.

Source:  
[health.maryland.gov](http://health.maryland.gov)

## Program Update

On October 6 at 0700 hours, the Charles County MIH Team implemented the Model-T program. This program goes above and beyond the “leave behind NARCAN” on Overdose calls by providing Buprenorphine, which is a medication that helps people reduce or quit their use of opioids like heroin and prescription painkillers.

This program is heavily coordinated with the Behavioral Health Division on the Dept of Health along with our Medical Director, Dr. Seaman. The MIH Team went on their first Model-T call at 0704 hours on Oct 6, just 4 minutes after being placed in service. This verifies the need in the community for this type of service and we are hopeful for more positive outcomes following overdose calls where opioid dependency services are readily available to anyone in Charles County.

18-year-old Chase Lancaster (right, with plaque) poses with several dozen trauma and EMS system honorees who helped to save his life.

## ‘On the Brink of Not Surviving’: Honoring the Team That Saved Montgomery County Teen

*R Adams Cowley  
Shock Trauma Center  
Honors 51 Trauma  
Professionals,  
First Responders  
Who Saved the Life  
of a Critically Injured  
Teenager*

**ON APRIL 25, 2026**, the R Adams Cowley Shock Trauma Center at the University of Maryland Medical Center honored 51 trauma professionals and first responders who saved the life of a 16-year-old Montgomery County high school student who was on the brink of death after being shot at a party in 2024. More than 700 people attended the trauma center’s “One Maryland, One Shock Trauma” event at the France-Merrick Performing Arts Center in Baltimore.

Chase Lancaster, now an 18-year-old senior at Northwest High School in Germantown, attended the celebration with his family. He was critical-

ly injured when gunfire erupted at a party attended by about 150 high school students in Urbana on August 9, 2024.

An innocent bystander, Chase lost 70 liters of blood – 14 times the total volume in an adult’s body – and underwent 20 surgeries after a bullet pierced his right side and lower chest, nicking the inferior vena cava, the largest vein in his body. The bullet also ripped through his diaphragm, liver, stomach and right kidney and damaged his heart. Chase needed 150 units of blood products to save his life. *(continued)*

*From left: Dr. Kristie Snedeker, Chase Lancaster, and Dr. Thomas Scalea.*

“Every one of his organs failed. His kidneys failed, his lungs failed, his heart failed, his liver failed,” recalled Thomas M. Scalea, MD, the Honorable Francis X. Kelly Distinguished Professor of Trauma Surgery at the University of Maryland School of Medicine and Shock Trauma’s Physician-in-Chief. “If Chase was not the most badly injured patient we saw that year, he was very close. He was really on the brink of not surviving.”

Chase spent two months at Shock Trauma and another two months at the Mt. Washington Pediatric Hospital before going home in December 2024.

Shock Trauma’s signature event, now in its 35th year, highlights the extraordinary collaboration between Shock Trauma and its emergency medical services (EMS) partners throughout Maryland. Shock Trauma is at the heart of the unique, highly coordinated statewide system, which is a national model for trauma care.

“One of my greatest privileges is having the opportunity to work alongside our extraordinary trauma care teams and our remarkable partners within Maryland’s EMS system,” said Scalea. “Every day, these courageous men and women

navigate unique and complex challenges. They do so without hesitation and at times, even risking their own health and well-being to save the life of another.”

This year’s celebration was held at the Weinman Hall M&T Bank Exchange and the Hippodrome Theatre at the France-Merrick Performing Arts Center in Baltimore. Those honored included doctors, nurses and other medical professionals at Shock Trauma and MWPH as well as members of the Maryland State Police (MSP) Aviation Command, Frederick County Fire & Rescue, Frederick County EMS, and the Systems Communications Center (SYSCOM) at MIEMSS. Proceeds will be used to acquire the latest state-of-the-art equipment and technology essential to advancing care within Shock Trauma’s Trauma Resuscitation Unit.

“This unit is slated for a significant renovation, and these investments will ensure that the updated space is equipped with the most innovative tools available, enhancing Shock Trauma’s ability to deliver faster, safer and more effective lifesaving treatment,” said Kristie Snedeker, DPT, Shock Trauma’s Vice President. \*

*For more on Chase Lancaster’s story, watch “One Maryland, One Shock Trauma” at <https://tinyurl.com/one-md-2026> or scan the QR code below.*

# Be Ready Maryland: A Family Safety Day

**THE MARYLAND COMMITTEE ON TRAUMA (MDCOT)**, a collaboration between the state’s trauma centers and the American College of Surgeons, hosted “Be Ready Maryland: A Family Safety Day” on May 17, 2026, at Maryland State Police Aviation Command headquarters at Martin State Airport. Approximately 400 people attended the daylong event, which featured Stop the Bleed® training, fall prevention classes, teen safety classes, and an injury prevention fair, as well as family-friendly activities such as face-painting, food trucks, and a special visit from the Ravens’ and Orioles’ mascots. Program faculty, comprised of volunteers from trauma centers across the state, trained more than 200 attendees and distributed 22 bike helmets to children. Learn more about MDCOT at <https://mdcot.com>. \*

# Talbot County EMS, 9-1-1 Visit Tilghman Island Elementary

*Talbot County DES emergency services personnel offered students the opportunity to explore an ambulance and ask questions.*

**TALBOT COUNTY DEPARTMENT** of Emergency Services and 9-1-1 Communications had the opportunity to attend Career Day at Tilghman Island Elementary School on June 2, 2026. Students had the chance to explore an ambulance, learn about the tools and equipment that Talbot County EMS crews use every day, and ask questions about emergency medical services. They also learned about the important role that 9-1-1 dispatchers play in answering emergency calls and helping coordinate emergency responses throughout the county. *[Photos: Talbot County Department of Emergency Services]*
